## ABOUT ME

Backend-focused full-stack developer with nearly 5 years of experience building production services in regulated tax, legal and audit environments. I work mainly in Python, FastAPI and C#, with PostgreSQL and Azure/GCP infrastructure in Terraform and Docker. I build LLM-powered systems in production, including agents and **RAG** pipelines, with **benchmarking**, guardrails and Langfuse observability to measure output quality. I was the AI enabler for my team and use GitHub Copilot and ChatGPT daily to improve code quality and delivery speed.

## EXPERIENCE

**PricewaterhouseCoopers (PwC)** Helsinki, FI

*May 2022 – Present*

***Senior Developer*** *Sep 2025 – Present*

- Designed and built a **C#** backend service for **document management system (DMS)** integration in an internal tax tool, structured around **interfaces** so new DMS providers can be added without changing the core application.
- Operate production **LLM** services on **Azure OpenAI** and **Vertex AI**, with **Langfuse** tracing, guardrails and benchmarking to track output quality and catch regressions as models and prompts change.
- Provisioned and maintained **Azure** (Web Apps, Function Apps) and **GCP** infrastructure, SQL/PostgreSQL databases, VNets/VPCs, private endpoints, firewall rules and NSGs, with access managed through **RBAC**/IAM roles. Defined everything in **Terraform** and containerised backend services with **Docker**, so services run the same in development and production.
- Built backend **integrations** in **C#** and **Python** with enterprise systems including **Harvey AI**, **M-Files**, **Salesforce** and **SharePoint**, through documented **API contracts** and reusable integration patterns.
- Standardised **CI/CD pipelines**, pull request review rules and automated testing across the team, which cut deployment issues and made releases more reliable for internal platforms.
- Use **GitHub Copilot** and **ChatGPT** Enterprise across the development lifecycle for writing and reviewing code, and enabled the team to adopt them without lowering quality standards.
- Planned project work in **Azure DevOps**, turning requirements into user stories and tasks and assigning them across development teams.

***Developer*** *Jun 2024 – Sep 2025*

- Technical lead on several high-impact projects, owning decisions on service architecture, technology choices and delivery timelines. Worked closely with the business to turn complex requirements into technical tasks.
- Built and maintained **AI agents** for internal consulting use cases, including sensitive data redaction, retrieval-augmented document querying and trial balance mapping, using **LiteLLM**, **CrewAI** and **LangChain**, with **guardrails** and **benchmarking** to keep outputs safe and measurable.
- Developed a shared internal package wrapping **Langfuse**, giving developers standardised tracing and observability for every agent.
- Designed **PostgreSQL** and SQL databases for AI and backend services, covering vector-based document retrieval, metadata indexing, upload tracking and monitoring of async jobs.
- Built **CI/CD pipelines** in **GitHub Actions** and **Azure DevOps** that run tests, build containers and deploy automatically, replacing manual releases.

***Trainee Developer*** *May 2022 – Jun 2024*

- Built and maintained internal full-stack applications for tax and legal analytics, working across **backend APIs**, **frontend interfaces** and data workflows.
- Developed **FastAPI** REST services for analytics and document-processing workflows, with clear API contracts so the frontend and other internal systems could integrate reliably.
- Designed and implemented AI-assisted workflows using **LLMs**, **RAG** pipelines and **vector databases** over real client documents, automating document-processing tasks that previously required manual review.
- Learned **C#** and used it to build automations and event handlers in **M-Files**, extending the document management system to fit consultants' day-to-day processes.

- Worked closely with tax and legal consultants to turn their needs into working tools, gathering feedback and iterating on features after release.

**Olus Education** Aug 2020 – May 2022
***Tech Educator*** Dublin, IRL

- Taught students aged 8–18 in Python, JavaScript, HTML, CSS, Processing and Scratch, along with computational and logical thinking.
- Planned interactive classes at each student's pace, tracked their progress and coached them on what they needed to work on.
- Created and edited learning material, including tutorials, audio and video, and helped develop curriculum plans and online courses.

## PROJECTS

**Generative AI for Tax and Legal Consultancy (MSc Thesis, PwC Finland)** 2024

- Addressed the problem of finding the right answer for a client case when thousands of court cases and decisions are stored across the firm's systems, researching how generative AI can help consultants find and analyse relevant past cases faster.
- Built a proof-of-concept **MS Word add-in** where consultants query client cases and get insights from previously solved ones, powered by a **RAG** pipeline.
- Developed the **Python**/**FastAPI** backend and **TypeScript**/**React** frontend, using **PostgreSQL** as the vector store for embeddings and semantic search over case documents.
- Integrated with **M-Files** to pull real case data, automating extraction and structuring of documents to feed the RAG pipeline so answers were grounded in actual cases.
- The proof of concept led to the adoption of **generative AI** across the team, becoming the starting point for further AI use cases.

## EDUCATION

**University of Helsinki** Aug 2022 – May 2024
*MSc Computer Science: Software Engineering* Helsinki, FI

- **Coursework**: Software Architecture, Full Stack Web Development, AI, Data Visualization, Network Systems and Services, Design and Analysis of Algorithms, Distributed Systems
- **Thesis**: Generative AI for Tax and Legal Consultancy

**Maynooth University** Sep 2017 – Jun 2021
*BA Computer Science and International Business* Kildare, IRL

- **Coursework**: Data Structures, Algorithms, Databases, Computer Systems, Networking, Operating Systems and Concurrency, Software Testing, Software Verification, International Business, Managing Innovation
- **Exchange**: One year at Aalto University studying automation and engineering. Communications Manager at ESN Aalto

## SKILLS

**Languages** : Python, C#, TypeScript, JavaScript, SQL, HTML/CSS

**Backend** : FastAPI, REST APIs, microservices, async jobs, .NET, Node.js, M-Files VAF

**AI** : LLMs in production, RAG, LLM agents, model benchmarking, guardrails, Azure OpenAI, VertexAI, LangChain, CrewAI, LiteLLM, Langfuse (observability), GitHub Copilot, ChatGPT Enterprise

**Cloud & Infrastructure** : Azure (Web Apps, Function Apps, Azure OpenAI, SQL servers, Front Door, API Management, Container Registry), GCP, Terraform (infrastructure as code), Docker, VNets/VPCs, firewalls and NSGs, RBAC/IAM

**DevOps** : CI/CD, GitHub Actions, Azure DevOps (pipelines and boards)

**Databases** : PostgreSQL, MySQL (SQL); MongoDB, CosmosDB (NoSQL); vector databases
